### RSPCA Endorses Oscillot!

The revolutionary new cat containment system, Oscillot™, has won endorsement from the Royal Society for the Prevention of Cruelty to Animals, the RSPCA Australia.

Australia's peak animal welfare body has strict guidelines about the treatment of animals, with the overarching mission to ensure all animals have the *'freedom to express natural behaviour, freedom from hunger thirst and discomfort, and freedom from pain injury or disease'*.

It is the first of these, the freedom to express natural behaviour that was very much in the forefront while the Oscillot™ System was being developed.

Oscillot™ allows cats to follow their natural instincts to roam freely while being safely contained within their owners' yards.

A great deal of time also went into ensuring that the design and materials used in Oscillot™ would not be harmful to cats in any way.

"The RSPCA is very pleased to be working with Oscillot to provide cat lovers with a system that allows their pets the freedom to roam and play while keeping them safe", says RSPCA Australia's CEO, Heather Neil.

"Of course, installing an Oscillot cat containment system does not negate the need for desexing and microchipping your cat", says Ms. Neil.

Inventor Paul Bok says "We are delighted the RSPCA has given our product the stamp of approval and we're looking forward to getting Oscillot™ out into the marketplace to encourage responsible cat ownership and promote cats' overall safety and wellbeing".

### Spring fever for Oscillot!

The prototypes and designs for Oscillot™ have been refined, manufacturers and distributors have been appointed, and we're excited that the Oscillot™ System will be available appropriately from the first day of Spring on **September 1<sup>st</sup>**!

Let your cat roam...at home!

We have been negotiating with potential stockists Australia-wide, and their initial response has been fantastic. We can tell you that those who've already agreed to retail Oscillot™ include [Metalcorp](#), [Midalia Steel](#) and [Bluescope Distribution](#) outlets in Perth and throughout regional Western Australia.

**MIDALIA STEEL**

**BLUESCOPE STEEL DISTRIBUTION**

### *How easy is that?!*

Throughout the design process, Oscillot™'s inventor Paul Bok has kept in mind the need to make the system as simple as possible to install.

An easy-to-follow [installation guide](#) has been produced which will be available on the Oscillot™ web site.

The printable guide will cover not only the installation on the more common types of fencing fence, but also solutions for situations that may be a bit out of the ordinary.

Most importantly, the end posts which hold the Oscillot™ paddles have a spring-loaded bearing which will compensate for any minor misalignment by the 'do-it-yourselfer'.

*Just some of the fence styles  
and situations Oscillot can deal with*

### *Cat Control Laws*

The trend by local councils throughout Australia towards tighter controls on cat populations continues to grow.

One of the latest moves comes from Joondalup Council, in Western Australia which has proposed a new local law for the registration and sterilisation of cats.

Similar controls are already in place in many local government areas around the country, with some even going as far as night-time curfews to minimise neighbourhood nuisance issues and protect native wildlife.

The legislative response is being fed by a groundswell of public opinion that cat overpopulation poses a serious threat not only to the environment but to human health.

The Oscillot™ System provides an ideal way to meet the requirements of the new laws without curbing cats' natural behaviour. It will give owners peace of mind about their pet's safety and wellbeing.

### **Pet Desexing**

*Our biggest problem is multiplying  
- please desex your cat!*
